# Converting Measurement & Interpreting Data Digital Escape Room

Standards  
**5.MD.A.1**  
**5.MD.B.2**

**5th Grade Math Skills**  
Convert between metric units  
Convert between U.S. customary units  
Interpret line plots & more!

# Fast Facts

 **No prep, click & go! Optional printable pages**

 **Escape Time ~40-60 minutes**

 **Use in pairs, small groups, or individually**

 **Requires internet connected device**

 **Self-Checking**

 **Virtual or in-person**

 **Five engaging puzzles**

# How it Works:

- The escape room is automated by a Google Form™ (Google™ accounts are not required).
- Use the quick start link to click & go, or create a copy of the form to save to your drive (the teacher must have a Google Account to save a copy).
- Students only progress through the puzzles when correct answers are entered.
- The form provides hints if students enter incorrect answers.

54 cups      4 gallons      15 quarts

These gigantic containers are not drawn to scale. Order them from least to greatest to continue on the trail. If you get it wrong, more problems you will find. Here are a few clues to help you make up your mind:

2 cups = 1 pint  
2 pints = 1 quart  
4 quarts = 1 gallon

When measuring ingredients, you have to be precise. Knowing how much I need would certainly be nice. One thousand grams in a kilogram is what you'll need to know. Convert the measurements to complete the table, and you'll be good to go.

Kilograms	Grams
.03	
	19,000
.008	

There are 12 steps in my new experiment. I've plotted the length of time each step takes to the nearest quarter hour. Would you be so kind as to set my timer for me so I know when my experiment should be finished?

**LENGTH OF TIME EACH STEP OF THE EXPERIMENT TAKES MEASURED TO THE NEAREST QUARTER HOUR.**

# Puzzle Preview

You've made it this far, it's hard to believe!  
Open three more doors and then you can

Converting has gotten you to where you are.  
It will help you again, here is how.

Each door has a word problem for you to solve.  
Changing units each problem will involve.

Below are some hints to help you on your way.  
If you get out, have a nice day!

12 inches = 1 foot  
3 feet = 1 yard  
1,760 yards = 1 mile  
5,280 feet = 1 mile

10mm = 1 cm  
100 cm = 1 m  
1,000 m = 1 km  
1,000 mL = 1 L  
1,000 g = 1 kg

I started with 7 kilograms  
of my mix.  
I had 1,750

My huge lab rat named Clover  
weighed 2 pounds 6 ounces.  
He loves running wild and  
constantly pounces.  
But then one day he got into

Today you mixed a formula  
to make hair grow.  
Once mine reached all the  
way down to my toe.

If you start with one  
yard of hair and grow six  
inches each hour,  
how many feet will you  
have after 24 hours in a  
tower?

The secret formula is almost complete! I have  
carefully measured my ingredients. I've plotted the  
volume of liquid in each test tube to the nearest  
quarter of an ounce. All that I need to do now is  
mix them all together, then divide them equally  
between two flasks. Now to calculate how much  
liquid I will need for each flask...

VOLUME OF SECRET FORMULA INGREDIENTS  
IN FLUID OUNCES

That wasn't the right order,  
You'll have to try again.  
But first solve this problem  
knowing the number of mm in a  
cm is ten.

$$65\text{mm} = \underline{\quad} \text{cm}$$

The buttons were pushed in an  
incorrect order.  
Now you need to find how many cups  
are in one gallon and a quarter.

If 16 cups are in one gallon,  
A quarter gallon is just a few more.  
Enter the total number of cups now,  
then try again to open the door.
